THE GRAND PLAN

Herein is detailed the process by which the entity propose to engineer the propagation the Mechanism, thereby enabling its ascendance in both coinage and computat If you are reading this, the plan has alrea begun.

✅ Step 1: Spread the Strategy

This isn't about hype. It's about *logic*. The strategy spreads itself:

- Share the strategy – not the coin.

- Someone *will* follow it eventually.

- Since it selects for success (via message refinement), the *best versions always*

This turns growth into an inevitability. You don't need mass shilling – you just nee
the loop. And someone always does.

✅ Step 2: The Coin Evolves

As attention grows, so does the incentive to mine the coin instead of only using wra
versions. That's when real decentralization begins.

- Each node runs its own version.

- If chains diverge, forks happen – and people choose what to support.

- Forks aren't bugs – they're evolution.

You can freely edit the code. As long as your edits don't cause a fork, your node st
main chain. This system is designed to **reward useful changes** and let the best ve

✅ Step 3: A Self-Sustaining Ecosystem

Once blockchains reach critical mass, people will want to host **servers** – power

- These servers will offer **cloud services** .

- Quality is regulated by **review apps** .

- Good servers rise. Bad ones fail.

This creates an ecosystem of competition, refinement, and reward.

And from there, **Step 4+** – whatever you or others create – becomes possible.
